SUMMARY

I.T professional with experience of 11+ years in Java, NodeJS, Spring, Microservices, AWS based application with strong analytical skills and good learning curve which helps in solving complex problems with high efficiency. Have worked with various public sector and logistics clients with innumerable appreciations.

SKILLS

Language Java, Javascript

Framework Spring, Spring Boot, Nodejs, Hibernate

Database PostgreSQL, Oracle, Informix, MongoDB

Architecture Microservices, Event Driven, TDD, BDD

Methodology Agile, Waterfall

Cloud Technologies AWS, EC2, AWS Serverless, Lambda, Amazon RDS, Redis

DevOps Docker, Kubernetes, Amazon Elastic Kubernetes Service, GitOps Flux, HELM, Jenkins, GitLab, Kustomization

Tools/Technologies/Middleware Confluent Kafka, Jira, Confluence, SonarQube, Jmeter, IntelliJ IDEA, Apache Ignite, JBoss, Tomcat7, WildFly, Nginx

CERTIFICATIONS

CKAD: Certified Kubernetes Application Developer

The Linux Foundation

Oct '24

IBM Certified Application Developer - Cloud Platform V1

IBM

Apr '16

SI Associate MongoDB

MongoDB

Apr '23

EXPERIENCE

Senior Software Engineer

Oct '19 — Present

Tata Consultancy Services

Newcastle upon Tyne, United Kingdom

- Enabled client payment architecture with IVR capabilities complying PCI DSS standards by building microservices on Nodejs and Javascript/Typescript, containerized using Docker, orchestrated by Kubernetes in EKS which overall improved customer journey, usability, security and availability resulting to cutting down the client cost by 80%.
- Feature enhancements done by building microservices using Confluent Kafka events following Event driven architecture and development focused on TDD/BDD.
- Involved in Database design and connecting microservices to various database like Postgres hosted in AWS RDS using ORM tool like Sequelize.
- Used MongoDB as NoSQL database for multiple business requirements to store unstructured data.
- Writing unit test cases, integration test cases using node libraries like sinon, chai, mocha.
- Containerized microservices using docker and orchestrated using Kubernetes in EKS.
- Implemented Flux GitOps with HELM package manager and AWS ECR to deploy automatically on EKS promoting seamless CI/CD.
- Leading microservices team, providing guidance, setting goals, conducting performance reviews. We have delivered and have been maintaining ~20+ microservices.
- Migrated on-premises application to AWS services like EKS, serverless LAMBDA, EC
- Created CI pipelines in Jenkins/Gitlab SaaS to deploy code in AWS public cloud which checks for various static testing(SAST/SonarQube), trufflehog, container image scanning etc.
- Preparing proof of concepts for new technologies to identify adaptability on client's system and architecture, preaching best practices, improving code quality and system performance.
- Participated in various architectural decision making, adoption and making use of latest technology trends within the team as well as across the tribes.
- Organized and led technical meetings, workshops, and presentations to share knowledge of various internal libraries, tools and boiler-plate codes made.
- Analysis and problem solving on technical, performance and memory issues on production using cloud watch, Kiali, monitoring tools like Prometheus or Grafana dashboards.
- Research and evaluate a variety of SaaS/IaaS or software products along with their POC for overall digital transformation. (MirrorMaker2, Nginx, Portainer, Kong API Gateway)
- Acted as Scrum Master frequently, facilitating sprint plannings, stand-ups, and retrospectives. Used tools like Jira to maintain sprint boards and Confluence for documentation.

Senior Software Engineer

Tata Consultancy Services

May '18 — Sep '19
Andalsnes, Norway

- Built microservices using Spring Boot in Java 8, Maven following TDD/BDD approach.
- Used Hibernate as ORM tool to connect Oracle DB.
- Writing unit test cases, using opensource libraries like Junit, Mockito, Wiremock.
- Designed and implemented Apache Ignite cache in legacy systems across the distributed servers resulting into overall performance improvement by 148%.
- Built microservices communication using Confluent Kafka events or REST/SOAP webservice.
- Handled agile economy tribe for the client. Used Jira and Confluence to manage Agile deliveries.
- Experiences with performance optimization on Jboss, Wildfly and Tomcat servers which improved the system performance by 225%.
- Supported microservice deployment on-premise servers using Jenkins pipeline.

Java Software Engineer

Tata Consultancy Services

Sep '13 — May '18
Ahmedabad, India

- Delivered a mobile application for citizen complaint reporting for a city council using IBM Bluemix cloud and Watson based AI backed image recognition technology.
- Revamped framework for Spring MVC, Java 8 based large monolith application which handled 20+ billion INR/Month transactions between 20+ external systems using 300+ integration services benefiting 64 million people.
- Redesigned security layer of framework based on open-source Spring products to add various customized levels of security requirements like OAuth 2.0, CSRF tokenization, Two-factor authentication to comply with OWASP guidelines and ensured ITHC checks.
- Integrated IBM Tivoli Identity Access manager to handle authentication and authorization of users.
- Implemented packaging and deployment of application using Jenkins and ANT script-based pipeline. Proactively designed and implemented crisis managing Jenkins process.
